

On prem solution 😊

1. need approvals from the stake holders – ceo, cto, directors
2. procure / buy the servers ~ 2 weeks
3. retrofit the servers in server room - network engineers 24/7 3+1 teams
4. uninterrupted power supply
5. rent for the server room

Cloud solution :

- Tex-box config
- Increasing or decreasing servers as needed (scaling)
- Elastic
- Pay as we go

Whatever we want to do with the cloud platform

We do it via orchestrator through api

The orchestrator decides over fabrics

While the fabric-controller manages the racks
